LORDO

Flexibility in form and function

Dynamic and fatigue-free sitting in the workplace – that's what Lordo has been developed for in a unique and distinct design by Martin Ballendat. Thanks to two mechanism concepts and sophisticated movement technologies for the backrests, the seat anatomy follows the user's movement in a perfect synchronous, ergonomic way. This ensures that the body is always kept in balance.

LORDO

Flex (Syncro-Quickshift®)

Semi-transparent, fully flexible: since the backrest of the Lordo swivel chairs can be adjusted by up to 10 cm in height and is constructed out of a single, fully flexible mesh fabric, it can easily adapt to any user. That way, the user's body movement is engaged and the user's back is constantly well supported, whatever the sitting position. Lordosis pad (see ill.) = option

No matter if you pick a model with or without a neckrest, our Lordo swivel chairs with Syncro-Quickshift® mechanism adapt to the user's natural movement – in perfect harmony. The three-position seat-tilt and seat-depth adjustment combined with four-position synchronised movement enable a healthy and fully ergonomic way of working.

LORDO

Flex

The new developed, flexibly mounted backrest offers optimum body adjustment and ergonomic support during the whole movement process.

Syncro-Quickshift®:

The approved synchronised mechanism for the entry-level Lordo swivel chairs

QS Syncro-Quickshift®

- Flexibly mounted backrest with an elastic mesh fabric for optimum support and dynamic sitting
- Wide range of the backrest height adjustment (10 cm) to cater for the individual body sizes of users
- Syncro-Quickshift® with rapid adjustment of the backrest counterpressure offers support for different users and is the ideal solution for shared workstations
- Backrest opening angle 125°
- Three-position seat-tilt adjustment (-1°/-3.5°/-6°; standard)
- Seat-depth adjustment using sliding seat (6 cm/10 cm NPR)

LORDO

Flex advanced (Syncro-Dynamic Advanced®)

Daily office routines involve a deficit of physical activity, which can often lead to back pain due to sore muscles. The best solution is dynamic seating: anyone sitting down on a Lordo office swivel chair with Syncro-Dynamic Advanced® mechanism and an elastic backrest will experience both support and stability, and automatically remain in continuous motion. The backrest follows the movement process synchronously and with a constant counterpressure and ensures continuous, pleasant support. Illustration with lordosis pad = option

LORDO

Flex advanced (Syncro-Dynamic Advanced®)

The Syncro-Dynamic Advanced® mechanism is the perfect solution for fatigue-free and concentrated long-term working in motion. The seating comfort thus achieved is unique – regardless of the seated position.

The flexible seat which is divided into three sections automatically adapts to the user for perfect ergonomics. When you lean back, the rear part of the seat tilts downwards, moving in the optimum manner with respect to the backrest. Your legs do not lift in this seated position. Integrated automatic seat-tilt adjustment (up to -4°) during the movement process thanks to a seat that is divided into 3 sections (active pelvic support).

Syncro-Dynamic Advanced®: Sitting and working in the first class

SD Syncro-Dynamic Advanced®

- ▶ Optimum backrest support while using a transparent, pressure-regulating fabric which is elastic over its entire area
- ▶ Wide range of the backrest height adjustment (10 cm) to cater for the individual body sizes of users
- ▶ Syncro-Dynamic Advanced® with constant backrest counterpressure for a balanced seated posture
- ▶ Backrest opening angle 128°
- ▶ Integrated automatic seat-tilt adjustment (up to -4°) thanks to a seat that is divided into 3 sections (active pelvic support)
- ▶ Seat-depth adjustment using sliding seat (5 cm; standard)

LORDO

Classic (Syncro-Quickshift®)

Back comfort zone: Lordo provides optimal support for the back during everyday work thanks to its elastic mesh fabric and flexible lumbar segment.

Everyone admires the aesthetically slim silhouette of Lordo swivel chairs, whether they come with an integrated neckrest or simply a high mesh backrest. The proven Syncro-Quickshift® technology ensures that adjustments to the individual ergonomic needs of the user can be made in no time.

LORDO

Classic advanced

Back comfort zone: Lordo classic advanced with patented Syncro-Dynamic Advanced® mechanism and elastic mesh fabric is comfortable. The executive swivel chair delivers the best possible support for the back thanks to even pressure distribution throughout the movement process.

LORDO

Classic advanced

The swing-mounted lordosis segment of Lordo classic advanced with an elastic mesh fabric for optimum support of the user's back features a separate tensioned cover.

The elegant seating solution for the executive floor. A great thing to look at – even better to sit on: the Lordo executive swivel chairs come equipped with our patented Syncro-Dynamic Advanced® mechanism, guaranteeing comfortable and constant body support. Both seat and backrest follow the user's natural way of movement, including keeping one's legs in a comfortable position at all times.

LORDO

Visitor | conference

The cantilever chair has been created to match the Lordo swivel chairs. The light and airy backrest appears to be floating, as the seat and backrest of the chair are not directly connected to each other.

Visitor and conference chairs perfectly complete the Lordo product range. Their modern design and fully flexible mesh fabric backrest will be a true asset to both your guests and colleagues. There are a lot of functional options to pick from: The cantilever chairs are stackable, and the height-adjustable conference chairs are available with either gliders or castors.

GREEN CYCLE BY DAUPHIN

Sustainable working, production and thinking is important to us.

From start to finish, from the initial design to waste disposal, our processes are geared to developing high-quality, long-lasting but also environmentally friendly products for you. But we do even more: With the EMAS certification we voluntarily commit to continuously improve our environmental performance.

RECYCLING

- > Homogeneous materials
- > Easily demountable
- > Fabric made from PET bottles
- > Proper recycling of packaging materials by the manufacturer

DESIGN & ERGONOMICS

- > Sustainability as part of the design philosophy
- > Own design and development centre
- > Form, function and sustainability

LIFECYCLE

- > Free of emissions and pollutants
- > 5-year guarantee
- > Life cycle long-lasting due to retrofitting (e.g. changeable upholstery components)
- > Expendable parts are easy to replace and retrofit
- > Subsequent delivery guarantee for spare parts

SOURCING

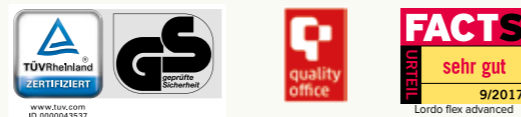

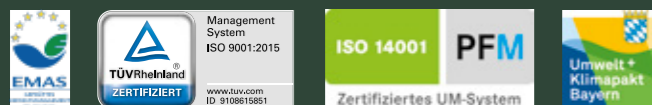

- > Responsible handling of resources
- > Nearsourcing: Using sustainable resources
- > 100% free from pollutants

LOGISTICS

- > Own fleet of trucks
- > Global logistics network
- > Own service team
- > By saving packaging material Reduction of packaging volume by 60% through delivery in foil
- > Optional: carton packaging made of recyclable material

PRODUCTION

- > Made in Germany, Offenhausen
- > Certificates: EMAS, DIN EN ISO 14001 and Bavarian Environmental Pact
- > 100% CO2-neutral green power
